

ABSTRACT OF THE DISCLOSURE

There is provided a hair setting assembly having a housing with one or more heating elements. The elements cooperate with one or more heatable hair rollers. The hair setting assembly
5 also has one or more ion and/or ozone emitters for emitting ions and/or ozone. Further, the hair setting assembly has a housing with a lid portion, and a base portion for selectively covering the heatable hair rollers and the one or more ion and/or ozone emitters, and a support connectable to the housing so that the
10 housing can be tilted about an axis in at least one direction through a specified angle while sitting on a surface.
